

EMMANUEL ODION JAFARU

Senior Full-Stack & Mobile Software Engineer

Abuja, Nigeria | +234 916 262 2433 | jafaruemmanuel48@gmail.com

PROFESSIONAL SUMMARY

Full-stack and mobile engineer with 7+ years architecting multi-tenant, role-based platforms end-to-end across fintech, healthtech and edtech — from NestJS/PostgreSQL and NestJS/MongoDB backends and React/Next.js frontends to React Native/Expo and Flutter clients. Experience spans access control and security (RBAC, JWT, 2FA), payments and ledgers (Paystack, double-entry accounting), Linux server deployment (Ubuntu, DigitalOcean), and hands-on testing and quality practice (Jest, Playwright, Detox, Postman, Sentry). Comfortable owning a feature from requirements and product decisions (Jira, Figma, pitch decks) through to shipped, monitored software. One inventory system saved ₦20M+ within 4 months of launch; a portal redesign lifted usability 35%. Available to start immediately, fully remote.

CORE SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, Vue.js, Angular, TailwindCSS, HTML5, CSS3, WordPress

Backend & Data: NestJS, Node.js, Express.js, PostgreSQL, MongoDB, REST API design & integration, RBAC and deny-by-default access control, JWT invalidation with live permission propagation, double-entry ledger design, multi-tenant systems

Mobile: React Native, Expo, Flutter

Infrastructure & Deployment: Linux (Ubuntu) servers, DigitalOcean, Git/GitHub

Security: Google Authentication/2FA, escrow & transaction verification (Paystack), audit logging

Testing & Quality: Jest, Playwright, Detox, Postman, Sentry, unit and end-to-end testing, code review and refactoring

Product & Delivery: Jira, Figma, Trello, Notion, Asana, Monday, Agile, roadmapping, requirements gathering, pitch decks & SWOT analysis, KPI-driven decisions

PROFESSIONAL EXPERIENCE

Senior Engineer (Full-Stack & Mobile) — Splashtech Studios | 2025 - Aug 2026 | Remote

- Architected and built a multi-tenant business-management platform for Nigerian and African SMBs (PostgreSQL, web and React Native mobile clients), **onboarding 20 separate business entities** and steadily growing, with well-ordered, reliable data flow across tenants: a setup wizard enabling modules per business type (retail, services, made-to-order, food & beverage) on one shared core, multi-branch support, granular staff permissions, a platform admin console, FIRS e-invoicing, and offline resilience.
- Architected a hospital management platform for a 15-bed specialist hospital in Lagos, **serving 5,000+ users** — doctors, nurses, patients, lab attendants, and clerical staff — interacting with patient records/EMR, scheduling and queues, pharmacy, lab, billing with HMO/NHIA, admissions, and telemedicine (React + TypeScript, NestJS, PostgreSQL, React Native/Expo mobile app).
- Designed a modular-monolith ecommerce CRM backend (NestJS, MongoDB) with deny-by-default access control (department, role, and user-override cascade), an employment-status state machine, JWT invalidation with live permission propagation, and a double-entry general-ledger architecture.
- Built a Publishing Hub CRM (NestJS, MongoDB) that has **processed 1,000+ emails** to a growing contact list: an email engine (Resend, scheduled campaigns), CSV contact and list import with tagging, and a Paystack booking flow with a 30-minute hold verified through Paystack's Verify Transaction API.
- Designed a mobile app that turns a child's study notes into fun, playable learning games; built a Flutter mobile app for AI video editing.
- Wrote end-to-end tests with Playwright (web) and Detox (React Native) alongside Jest unit tests, with Sentry monitoring in production.
- Tools:** Playwright, Detox, Jest, Postman, Sentry, Jira, Figma

Lead Engineer — Qreva (Fintech) | Apr 2026 - Jul 2026 | Remote

- Led architecture and development of Corperone.com, a multi-service ecosystem for NYSC Corps members spanning a Next.js web app and a Flutter mobile app, backed by a NestJS API — serving 7 distinct user roles (Admin, Storefront Owners, Members, Accommodation Agents, Trainers, Counsellors, NYSC Officials).
- Built core platform modules: marketplace and storefront, accommodation booking, academy/training and certification, security and emergency reporting, welfare requests, savings, and soft-loan request and disbursement.
- Designed and built a private, internal multi-franchise CRM for a multinational group with strict role-based access control: admins toggle between a consolidated cross-franchise view and individual franchise operations, while staff access stays scoped to their own franchise. Covers Inventory, Finance, Operations, Purchase, HR, and Audit Logs, with a companion admin-only oversight mobile application.
- Managed deployment of the platform to Ubuntu servers on DigitalOcean.
- Tools:** Jest, Postman, Sentry, Figma, DigitalOcean, Ubuntu

Senior Frontend Engineer (Contract) — RapidMedcare | Apr 2026 - Aug 2026 | Remote

- Built the insurance and doctor-facing UI for a healthcare platform, turning clinical and policy workflows into usable screens.

- Integrated the frontend with backend APIs for reliable data flow across insurance and provider features.
- **Tools:** Jest, Postman, Sentry, Figma

Software Engineer — KiarosHof | 2024 - Jun 2026

- Designed and built three full-stack internal systems end-to-end (Next.js, NestJS/Express, MongoDB), each with a companion mobile application and **used daily by about 100 staff for multiple, simultaneous activities:** Inventory & CRM, Fleet Management, and Engineering Progress.
- Inventory & CRM System — digitized material tracking and stock flow across web and mobile, reducing material loss and saving **#20M+ within 4 months of launch**.
- Fleet Management CRM — built a web and mobile ride-booking and dispatch system where team leads assign rides to team members, with full vehicle lifecycle tracking via repair, replacement, and fuel logs.
- Engineering Progress CRM — enabled engineers to log before/after project videos each work day from web and mobile, compiling a complete, shareable history per house/project for marketing staff and clients.
- Owned product features end-to-end as feature owner, translating product vision directly into shipped functionality.
- Ran end-to-end test automation with Playwright and Detox across the web and mobile clients, alongside Jest unit tests.
- **Tools:** Playwright, Detox, Jest, Postman, Sentry, Jira

Front-End Engineer — Eduvacity | Jun 2024 - Sep 2024 | Hybrid, Full-time

- Managed the Next.js and TypeScript codebase and documentation using Git and GitHub.
- Redesigned website portals and dashboards for a platform with **5,000+ onboarded users** — students completing daily lessons and assignments, and mentors uploading lesson content and grading — increasing overall product usability by 35%.
- Deployed a scholarship feature that expanded the user base and helped attract investor deals.
- Coordinated across cross-functional teams, improving project timelines and team productivity by 5%.
- **Tools:** Jest, Postman, Sentry, Figma

Mobile Engineer & Product Manager — Astrovasity Enterprise | Apr 2024 - Jul 2024 | Remote, Contract

- Developed the Eduwallet mobile application using React Native, ensuring smooth cross-device functionality.
- Operated in a dual engineering/product capacity — leading brainstorming sessions and driving decisions that affected KPIs and user feedback.
- Created pitch decks and SWOT analyses; led project pitches that secured funding.
- **Tools:** Jest, Postman, Sentry, Figma, Jira

Mobile Engineer — Cudium, NG (Fintech) | Jan 2022 - Apr 2024 | Onsite, Full-time

- Built a P2P feature for forex exchange and commodity purchases in the mobile app, **used by around 10,000 users**, holding orders in escrow until buyers confirmed receipt.
- Strengthened application security by implementing Google Authentication (2FA) and other protective measures.
- Improved code quality through regular refactoring and close collaboration with backend teams.
- Trained interns at Austond Innovation Hub.
- **Tools:** Jest, Postman, Sentry, Figma

Front-End Web & Mobile Developer — Freelance | Jan 2019 - Dec 2021 | Remote

- Developed and launched multiple web and mobile applications using React, Next.js, TypeScript, Express, Vue, Angular, WordPress, and React Native for a range of clients.
- **Tools:** Jest, Postman, Sentry, Figma, Jira

EDUCATION

BSc. Agriculture (Animal Sciences) — Obafemi Awolowo University, Ile-Ife, Osun State | Aug 2016 - Oct 2024

CERTIFICATIONS & TRAINING

JavaScript Essential Training, LinkedIn Learning (2019) · Google Developers Scholarship (React & Angular) · ALX Software Engineering Scholarship (2021) · HNG Frontend Track (2022)

COMMUNITY, SPEAKING & LANGUAGES

Member: GDG Abuja, Code Academy Abuja, Africa Tech Community · Guest Speaker, “Becoming a Mobile Engineer,” ATC Africa OAU Chapter (2023) · Web Development Mentor, Ascend Bootcamp (2025)
